

WALKER MOWERS

HI-DUMP™ Features

- Sturdy construction adds only 150 pounds (56 kg) to tractor weight
- Efficient design completely cycles the unit in 20 seconds
- Catcher box is raised 67 inches (170 cm) from the ground
- Assembly bolts on in the field with minimal labor or may be ordered as factory installed option

Two independent hydraulic cylinders control the lifting and dumping cycles and are controlled by an electric/hydraulic power unit (dump in any position)

Make Sure Your Walker is

Equipped
with

**WALKER
HI-DUMP™**

Two toggle switches by the operator seat control the lifting and dumping functions

Remote battery terminals allow the catcher to be raised by an auxiliary power source in case of a dead battery

Catcher box is mounted only 3 inches (7.5 cm) higher to maintain tractor stability and low center of gravity
